

THE ULTIMATE GUIDE

SQL INTERVIEW QUESTIONS YOU MUST PREPARE

*These SQL interview questions
get asked the most!*

Used at [Airbnb](#), [Meta](#), [Amazon](#) & more.

what's inside?

- ① The most common SQL questions
- ② What interviewers are testing
- ③ How to approach them
- ④ Real problems from top companies
- ⑤ A smarter way to practice

these keep coming up!

Still Googling these? Fix that.

- ▶ Find duplicates
- ▶ Second highest salary
- ▶ `RANK()` in partitions
- ▶ `WHERE` vs. `HAVING`
- ▶ Moving averages

They're basic. But they trip up candidates daily.

what they're *actually* looking for

It's not syntax.

- ▶ Can you break down the problem?
- ▶ Are your results correct?
- ▶ Do you explain your logic?
- ▶ Can you write joins that make sense?

Show how you think. That's the skill.

how to *structure* your answer

Skip guesswork. Use this:

- 1 Ask clarifying questions
- 2 Think out loud
- 3 Start with a small query
- 4 Add logic step-by-step
- 5 Test with edge cases

Messy logic = missed opportunity.

practice with these!

Try real SQL questions used by:

- ▶ **Yelp** – *"Active users by month"*
- ▶ **Airbnb** – *"Avg. price per city"*
- ▶ **Google** – *"Moving average by date"*
- ▶ **Instacart** – *"Most frequent item combo"*

No memorizing. Build them.

Get hands-on practice that feels like the real thing!

-  1,000+ **real** SQL questions
-  **Actual** company challenges
-  Built-in editor, real-time feedback
-  Everything built to prep you for the interview room
